

Pharmaceutical Level GMP

Safe, Effective,
Consistent Essential
Fatty Acids

Consumers depend on natural products for their health. Bioriginal Food & Science Corp. believes these consumers deserve products produced to the same stringent standards as pharmaceuticals. With a reputation for quality, we guarantee safe, effective, consistent essential fatty acid (EFA) products. As a quality innovator, we go beyond government and industry standards to supply our customers superior EFA products manufactured to Canadian pharmaceutical level Good Manufacturing Practices (GMPs).

The Canadian government requires supplement and other natural product manufacturers, packagers, labelers, and importers to follow Natural Health Product Good Manufacturing Practices. Bioriginal was one of the first suppliers to earn a site license to produce GMP certified essential fatty acids (EFAs), and is audited by Health Canada to ensure we maintain this status.

We believe our products should be held to higher standards. Since 1998, we have operated our manufacturing facilities according to the more stringent Canadian pharmaceutical level GMP requirements. This program regulates every person and every step of our process from ingredient sourcing, production, packaging and testing, to education and training of our management and staff.

Pharmaceutical Level GMP guarantees:

- 🌱 active ingredient content, purity, and homogeneity
- 🌱 an independent review of all products
- 🌱 packaging free from air, light, and oxygen
- 🌱 stability throughout the products' shelf life
- 🌱 products remain free from herbicides, pesticides, heavy metals, and PCBs
- 🌱 a consistent level of quality on every lot of Bioriginal's products

In addition to adhering to these strict practices, we insist all outsourced operations must comply with GMP certification.

Canadian pharmaceutical level GMPs are more than a set of guidelines. These government regulated standards are constantly evolving our sourcing, production, training and testing programs, designed to guarantee every lot of every Bioriginal product is safe and effective. Canadian pharmaceutical GMPs set a benchmark that meets or exceeds those of the National Nutritional Foods Association (NNFA), the U.S. Food and Drug Administration (FDA), and the World Health Organization (WHO).

Under current U.S. regulations, dietary supplements are not subject to GMPs. Companies choosing to conform to GMPs can apply to be audited by private organizations, or self regulate themselves under the current GMP (cGMP) standards drafted by the FDA. Bioriginal chooses to manufacture its EFA products to the highest government regulated standards in North America.

Canadian pharmaceutical level GMPs raise the bar on EFA quality. At Bioriginal we have the facilities, processes, knowledge, and experience to provide you with the pharmaceutical level GMP products your customers deserve.
